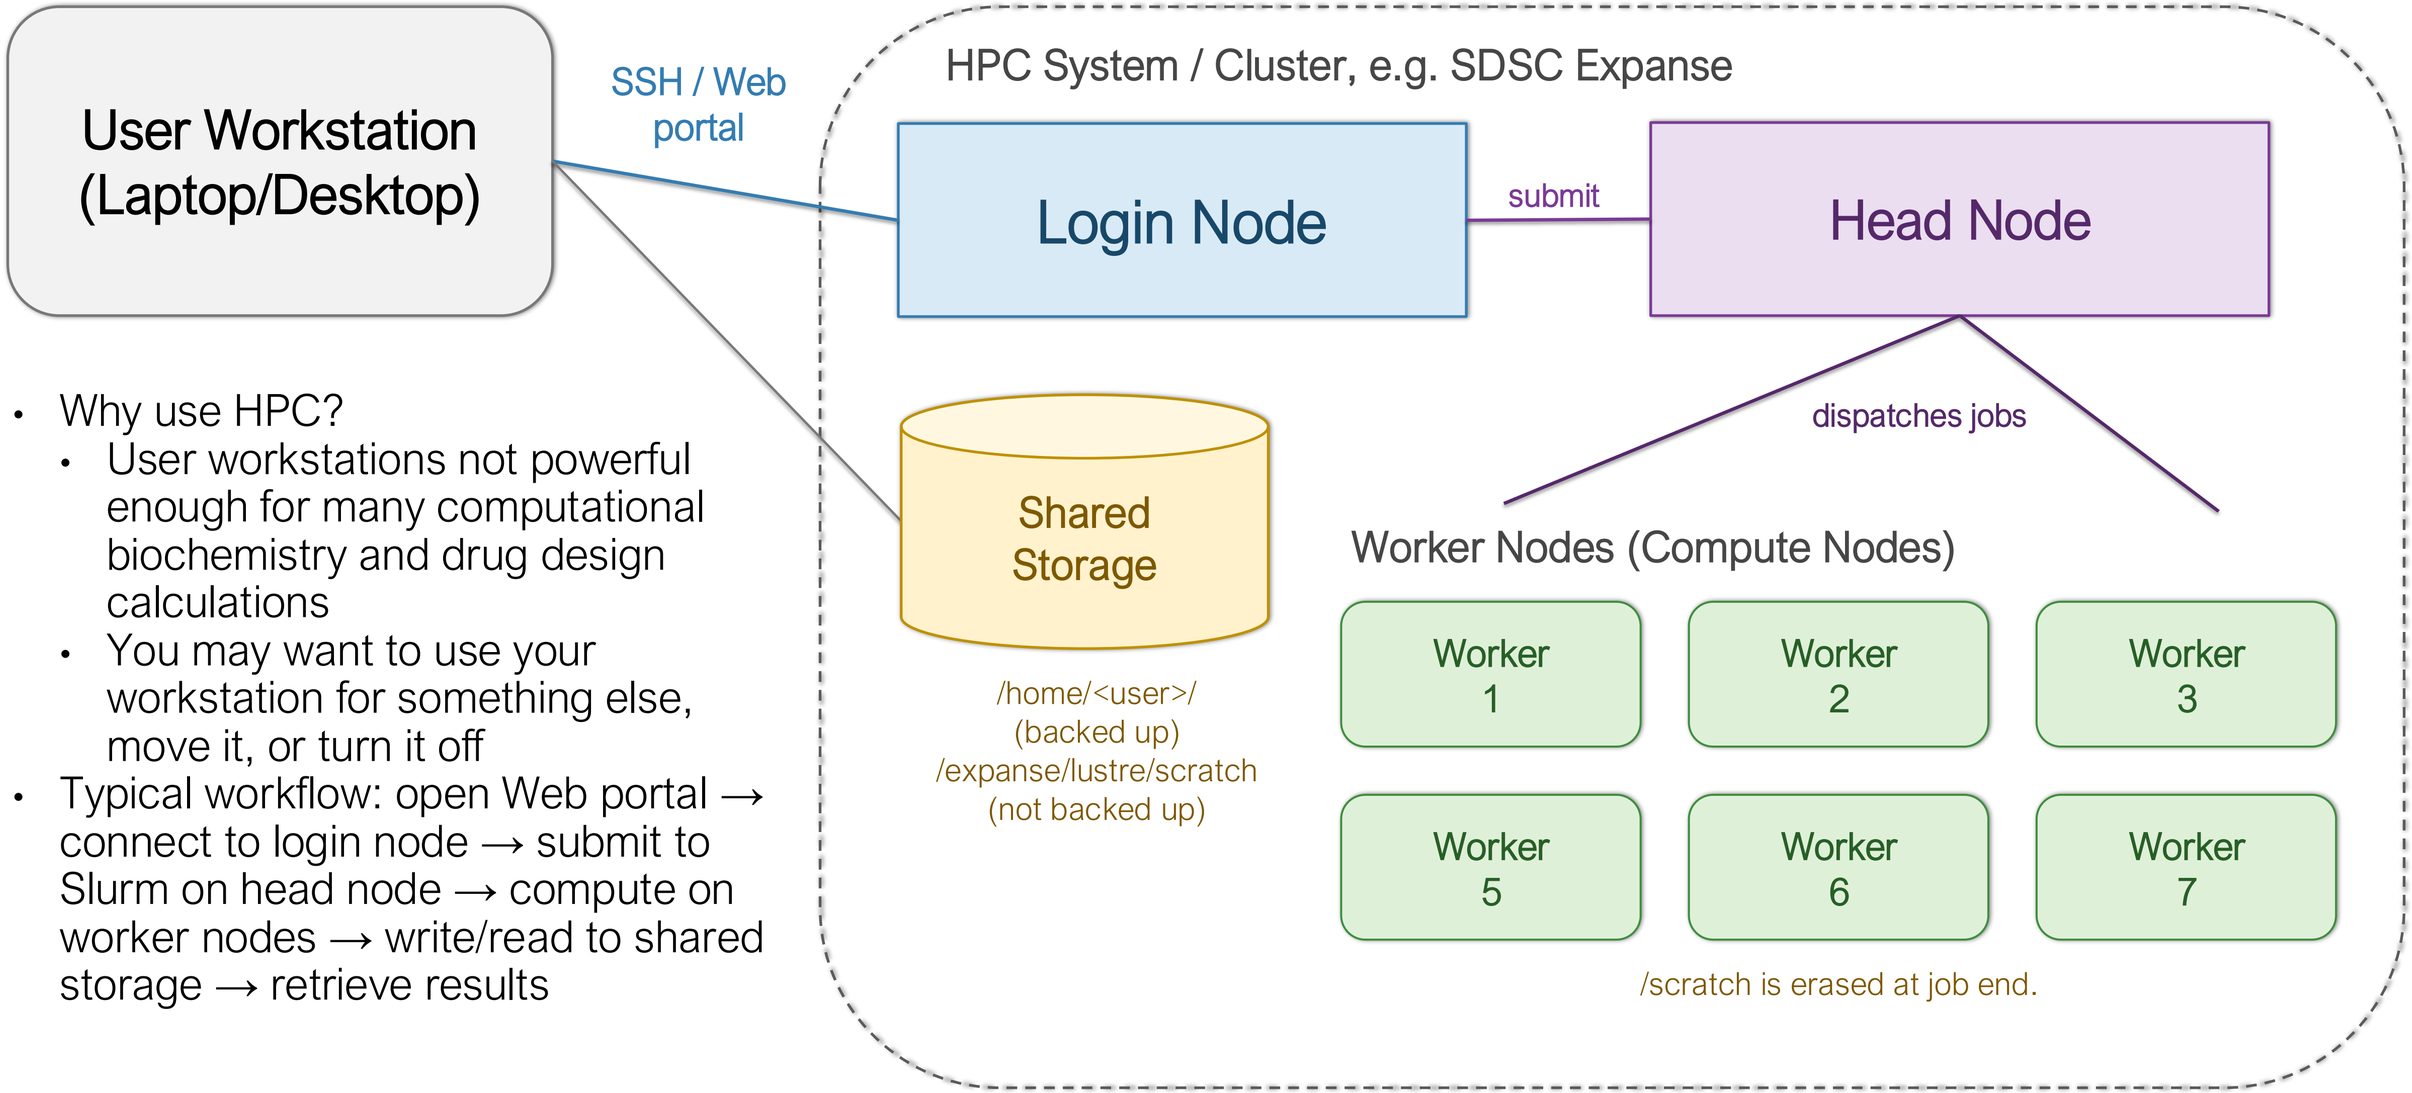
Chem 456 3/2/2026

- High-performance computing (review)
- Exercise 6: Virtual Screening with AutoDock Vina

High Performance Computing (HPC) Systems



- Why use HPC?
  - User workstations not powerful enough for many computational biochemistry and drug design calculations
  - You may want to use your workstation for something else, move it, or turn it off
- Typical workflow: open Web portal → connect to login node → submit to Slurm on head node → compute on worker nodes → write/read to shared storage → retrieve results
